

Project Name: Green Sun

Project Idea:

1- The Target Problem:

High costs of relying on non-renewable resources for electricity generation and the accompanying challenges:

- **Reliance on importing oil and gas**, which puts pressure on the state budget.
- **Instability of these resources due to international circumstances** (such as the war in Ukraine).
- **High maintenance and operating costs** for equipment that relies on fossil fuels.
- **Significant negative environmental impact:** Pollution of air, water, and soil, and the resulting health damages to humans, animals, and plants.

2- The Proposed Solution:

A clean and practical alternative had to be considered.

Solar energy represents the optimal solution for Egypt due to the availability of sunshine throughout the year across most of its lands.

- **The use of solar panels provides a permanent, clean, and environmentally friendly source of energy.**

Visual Identity

Logo Design

The logo features a large yellow circle. Inside the circle, the letter 'G' is formed by a warm orange semi-circle with short green lines radiating from its top-left edge. To the right of the 'G', the words 'Green' and 'Sun' are stacked vertically in a bold, green, sans-serif font. In the top-left corner of the slide, there is a small green wavy line. In the bottom-left corner, there is a small orange wavy line.

LOGO IDEA

The logo is inspired by the name "Green Sun," where the letter G forms a half-circle in warm orange, visually representing the rising sun. Soft green rays extend outward to symbolize clean, renewable solar energy.

DESIGN CONCEPT

The design merges two core elements:

- The sun: representing energy, power, and brightness
- The green color: symbolizing sustainability, nature, and a cleaner future

The combination visually reflects the brand's mission: promoting natural, clean, and renewable solar energy solutions.
